

Transmission of Electronic CAD files:

The fastest and easiest way to send drawings is via email is directly to the Sales Account Engineer you are working with. A complete list of email addresses is on our web site at www.harveyvogel.com

When sending a large number of drawings (50 or more), it is preferable to have them on USB Drive via regular mail or package delivery service.

We can also receive CAD files on CD-ROM or DVD (ZIP compressed or uncompressed). On request, we can download via FTP from your site or secure web portal.

Most Common Print format is in **.PDF** format.

CAD Files:

Part Drawing Files: For 2D Drawing files only, a **.DXF** or **DWG** format is acceptable.

Solid Models: Files preferred to be received in **.STEP** format.

SolidWorks Files: For (Solid Works) files, **.SLDPRT** or **.SLDASM** files are acceptable.

Pro-Engineering Files: (Wild Fire) **.PRT** files are acceptable.

Other Systems:

Our main platform is KeyCreator **.CKD** files. This is a new version of Cadkey. As with the above, we can also use the same files and bring them directly into KeyCreator. We also use SolidWorks.

We can print drawings in the following formats for quoting, but cannot directly use them in CAD programs for production purposes:

.GIF .JPG .BMP .PCL .RAS .TIFF

Conversion: We will also attempt to convert many other formats using conversion tools available, but the above formats offer the greatest chance of success. Harvey Vogel Manufacturing Co. can accept a variety of CAD files, whether in native format or in a compatible middle ground.
